# CHECK MATE 500

## Designed for maximum ergonomics

A rewarding and inspiring visit to your shop is made even better when your customers can pay and pass through the checkout area quickly and smoothly. In Checkmate, ITAB have used all our experience to create an optimal checkout that will provide maximum working ergonomics and efficiency for your checkout assistants/operators, and importantly, significantly improve a customer's checkout experience by delivering increased levels of customer satisfaction.

### Fast installation and commissioning

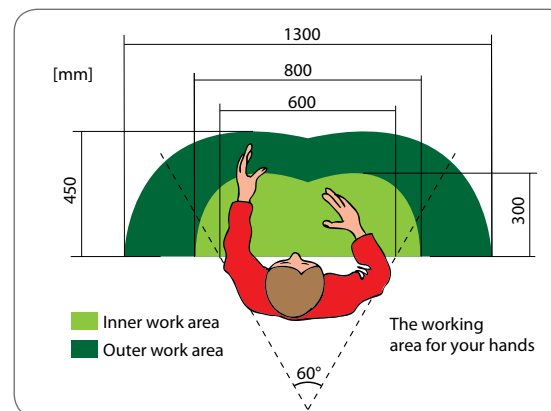

Checkmate - prepared for easy adaption to all well-established payment systems and cash registers. Easily accessible installation/data compartments for electricity draws and space for CPU.

### Focused on Ergonomics

Working as a cashier is physically demanding. Therefore excellent ergonomics are the cornerstone of our development. Checkmate is built to prevent unnecessary lifting and designed to avoid and minimize the cashier's range of reach/stretch. The straight design of the entry is the result of our ergonomic thinking. The infeed belt width and the rim height is optimized to minimize product stacking which gives the cashier a smooth, regular flow of goods. The infeed belt leads the goods towards the cashier's ergonomic working space. This means fewer and shorter distances for cashier to work around. The design provides both good ergonomics and operator efficiency.

### Options/Functions

- Modular with different lengths input and output
- Left and right hand check out
- Prepared for cash system
- Integrated weight scale to belt or rollers
- Third customer function
- Foot pedal with belt guide
- Optional keyboard
- High security with emergency stop and pinch protection
  - Also on the weight portion
- Concealed wiring
- Folding pack shelf
- Straight line input - for work near the band
- Belt scales minimize lifting and stretching
  - ITAB's intelligent integrated weight scale to belt saves cashier up to 800 tonnes of heavy lifting a year
- Varied posture - sitting or standing
- Ergonomic office chair with multiple adjustment

### Focus on ergonomics

Working as a cashier is physically demanding. Therefore excellent ergonomics are the cornerstone of our development. Checkmate is built to prevent unnecessary lifting and designed to avoid and minimize the cashier's range of reach/stretch.

### Did you know ...

...cashiers move goods equivalent to the weight of four large VOLVO cars each day representing 4-5 tonnes. Not only that, the cashier extends up to 40 km in a week. This is minimized with ITAB belt scale.

### Flexible Weighing Solutions

Choose between the integrated weight scale to belt or rollers. Both designs offer the same basic design that enables the belt or rollers can easily be removed for cleaning.

Belt radically simplifies the work and makes the movement of goods and the weighing is done without unnecessary lifting.

### Varied Seating Positions/ Cashier Posture

The office section is ergonomically designed and offers generous space for both sitting and standing. The chair is easy to adjust and can quickly be pushed under the counter standing at work. A sliding door behind the cashier to secure the area is optional. New heavy-duty construction of the swing arm of the chair.

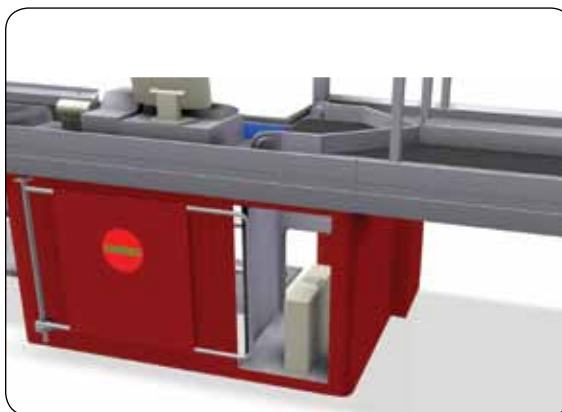

### Third Customer Handling Solution

ITAB's proven third customer handling function has been further improved with a smoother and more compact construction. This provides a more efficient check-out and better ergonomics for the cashier. More customers can pass the checkout in less time - increasing service level by about 30%.

### Neat and tidy when packing

At the back of the Checkmate is a sturdy packing shelf. Close to the packing shelf is the possibility of different options; freezer bags and bag dispensers. The packing shelf is hinged to facilitate easy cleaning.

### Easily accessible installation/ data cabinets

CM500 is equipped with a spacious space for computer equipment and is easily accessible from the front for service and installations.

### Cash System

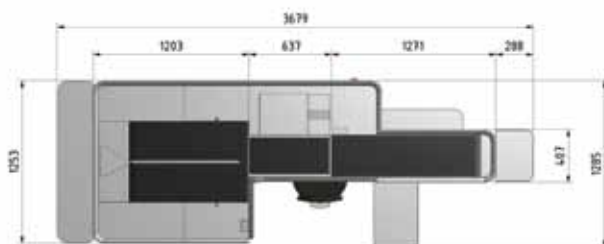

Checkmate is a step ahead of most checkouts and is designed for easy integration of all the market established payment systems.
