

PRODUCT INFORMATION SCANMATE

Next generation traditional checkout

The ScanMate solution is the next generation traditional check out from ITAB. This is mainly used to lower the cost for the retailer for traditional checkout and reduces queues. The solution has two customers flows with dual packing bays making sure to have maximum throughput served by one staff member.

The 360 degree barcode scanning will stop the belts in case any article is not captured via the barcode. It can include weighing scale and cash payment systems.

The checkout require no POS integration and is actually running like todays checkout from a software perspective.

Main Features ScanMATE

Solution description

- One staff member handles two flow of customers
- Smart scanning and a smart check out assists the staff member
- Staff member focus on exceptions (like fruit & vege or difficult barcodes)
- Any exception the system stops, most times our "one touch start" will get the flow going again
- Options with integrated weight scale, cash recycling systems etc
- No POS integration needed, POS system process work as in todays manned check out
- ScanMate appears like a scanner feeding barcodes to the POS
- Flexible feed in belt and packing bay designs

Key Benefits

- More capacity on same work hours
- Capacity example at 15 items is totally 102 customers / hour
- Increase throughput per work hour and thereby reducing queues
- A leap step in ergonomics for the staff member
- No integration means quick deployment in stores
